

ABOUT US

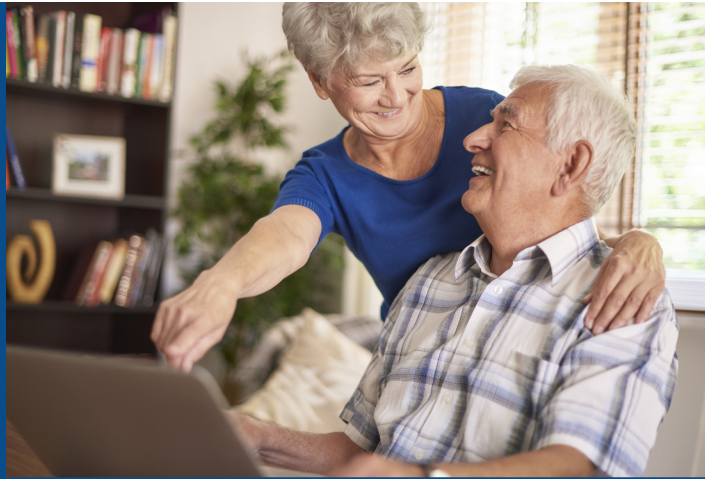

We provide elders the freedom of choice, allowing them to choose where to age with the highest quality of life and safety, by applying technology.

APPLYING TECHNOLOGY TO SENIOR CARE

We embrace safety and contactless care without sacrificing quality using non-intrusive remote wellness checking.

The safety and security of our loved ones is paramount to all of us, but we must not forget to care for the caregivers.

Technology allows for a degree of relief from the stress, time commitment and emotional strain of onsite caregiving by only alerting caregivers you when there is an event that requires attention.

TECHNOLOGY ENABLES US TO MAKE BETTER DATA DRIVEN CARE DECISIONS

INSIGHT SOLUTIONS: FALL DETECTION

Our technology solution provides the ability to not only recognize when a fall has occurred, but also allows you to understand the factors and environment around that fall. Technology allows us to transcend the empirical care decisions, and use fact based data to make important care decisions.

- Integrates multiple devices in one simple to use application
- Customizable alerts on events
- Non-intrusive, non-wearable devices
- Data provides deeper insights to wellness status and is sharable
- System is customized to address senior's needs
- Increased peace of mind and relief from caregiving stress and time commitment of being present
- Convenience of being connected to the senior without being present

24/7 Detection

Wall mounted, plug in sensors are placed in the residence and scan the environment 24/7 using harmless radio waves. The sensor detects a person's presence in the room, body position and, if a fall is detected, alerts are sent to caregivers to notify them of the event and possible need for assistance.

Sleep Sound

Sleep Sound provides real time insight to the elder's nighttime status using the above sensor to detect falls, a sleep mat, night lights and smart light bulbs. The sleep mat monitors the sleep cycle, awake time, in/out of bed activity and heart rate. Caregivers are alerted when the senior leaves bed, and lights turn on automatically for increased safety. The caregiver receives additional alerts if the senior does not return to bed. The data collected for the senior's sleep, out of bed activity and heart rate is provided for wellness insight and better care planning.

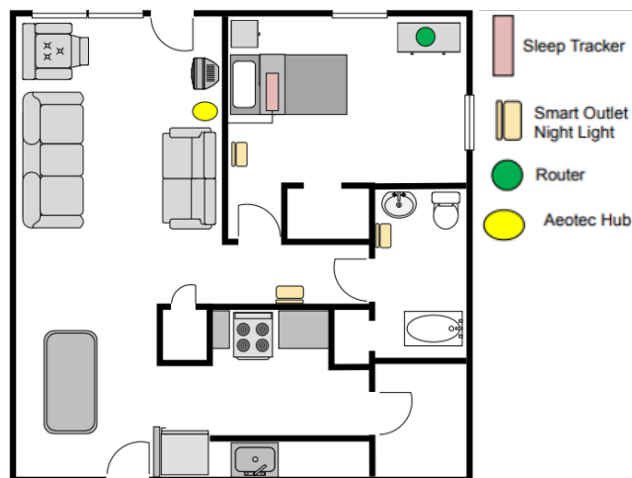

Total Solution

This option includes 24/7 Fall Detection throughout the residence plus Sleep Sound for additional monitoring with reporting in a single, integrated application.

WHY USE A TECHNOLOGY SOLUTION?

- It is affordable, non-invasive and easy to use
- Increased peace of mind and relief from caregiving stress and time commitment of being present with the senior
- Convenience of being connected to the senior without being onsite
- Helps prevent hospitalizations by being able to respond to falls quickly
- Provides access to more information for a more complete understanding of the senior's status and better care planning
- Caregiving can be shared without regard to location
- Enables seniors to live independently with dignity and enjoy a better quality of life

SAMPLE INSTALLATION

ESTIMATED COST OF EQUIPMENT \$499*
MONTHLY FEE \$25

* Installations are customized based upon the senior's needs, number of rooms and size of the residence.

DASHBOARD

Collected wellness data is reported on the dashboard for care management.
